

*In the Claims*

Please add the following new claims:

---

34. (Newly Added) The method of claim 8, wherein the insects have cysteine proteases that are insensitive to host plant derived cysteine protease inhibitors.

35. (Newly Added) The method of claim 8, wherein the insects are one or more of Colorado potato beetle, corn rootworm, thrips and leafminer.

36. (Newly Added) The method of claim 8, wherein the nematodes are cyst nematodes or root knot nematodes.

D2 37. (Newly Added) The method of claim 8, wherein at least one of the proteins containing at least one type I repeated thyroglobulin domain is human p41 invariant chain fragment or a homologue or functional derivative thereof.

38. (Newly Added) The method of claim 8, wherein at least one of the proteins containing at least one type I repeated thyroglobulin domain is isolated from the sea anemone *Actina equina* and having the amino acid sequence SEQ ID NO: 2 or a functional derivative or a homologue thereof.

39. (Newly Added) The method of claim 8, wherein at least one of the proteins containing at least one type I repeated thyroglobulin domain is a protein isolated from the eggs of chum salmon or a homologue or functional derivative thereof.
